**Millennium Xtra**

**Technical Bulletin**

**Title:    Migrating from WaPac to Xtra**

**Contents:**

Overall process of migration is as follows:

1.  Backup current database and send it to Millennium Technical Support.
2.  Receive converted backup from support.
3.  Install Xtra system.
4.  Restore converted backup in new Xtra system.

Let's take a closer look at these steps.

To perform backup of current database:

1.  Run **WaPac Manager** and go to **Tools**.
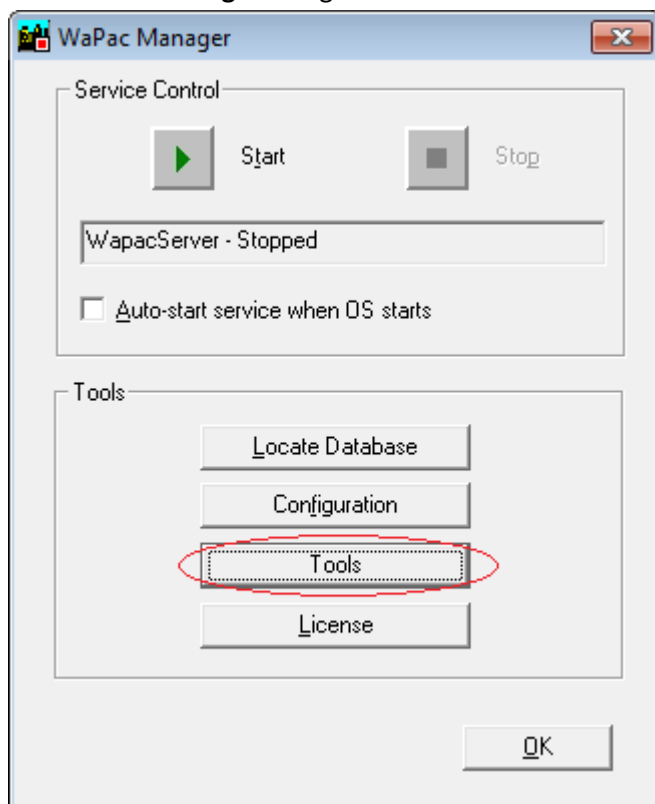

2. Check option **Backup** and select Backup Location. Click **Ok.**

3. Send the backup file to technical support. Details of how to transfer file should be provided in e-mail from technical support.

When you received converted backup file you may proceed with Xtra installation. To install Xtra system:
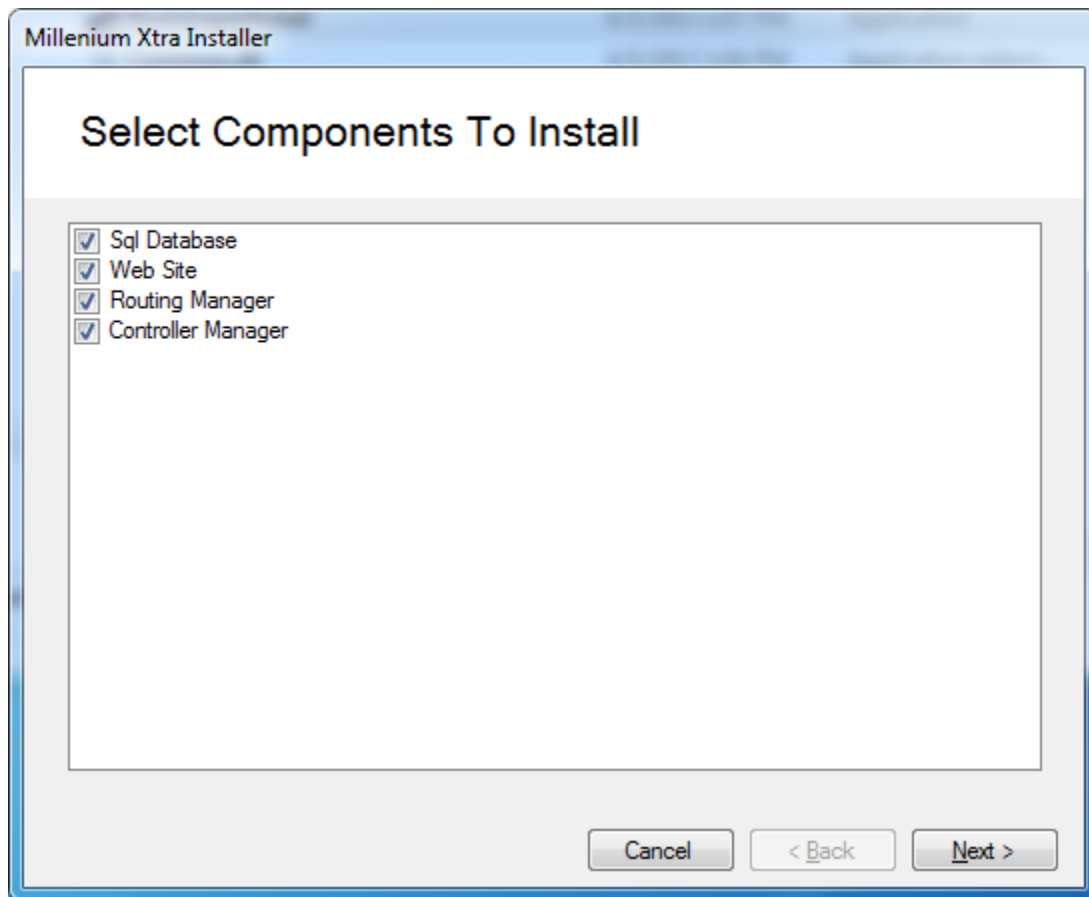

1. Make sure you have installed SQL Server with Full Text Search feature.
2. Run BootstraperInstall from folder with Xtra installation files.
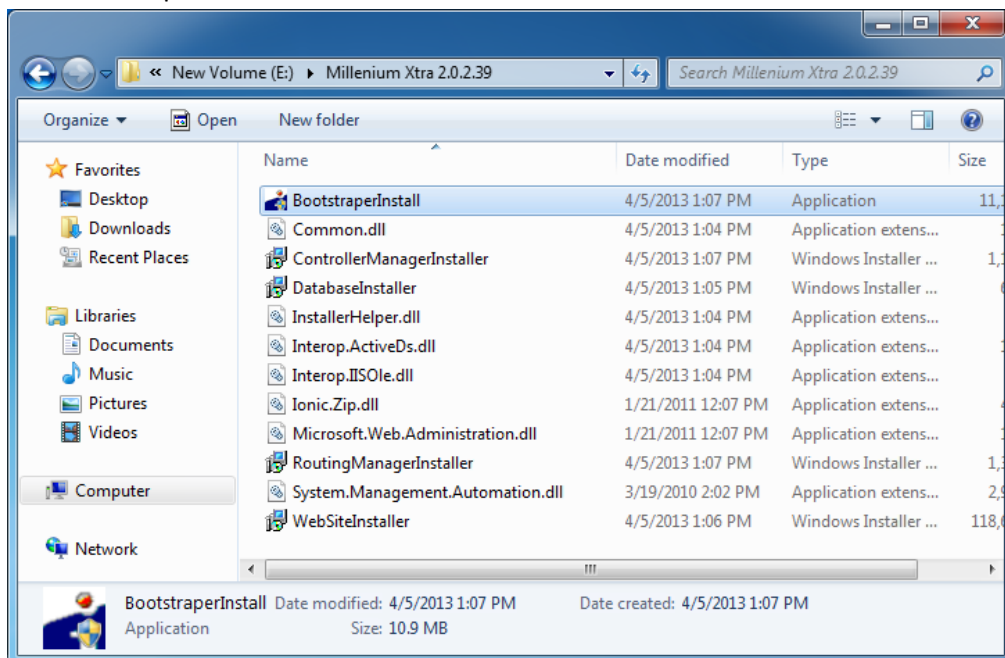

3. Select **I Agree** option if you agree with License Agreement and click **Next.**

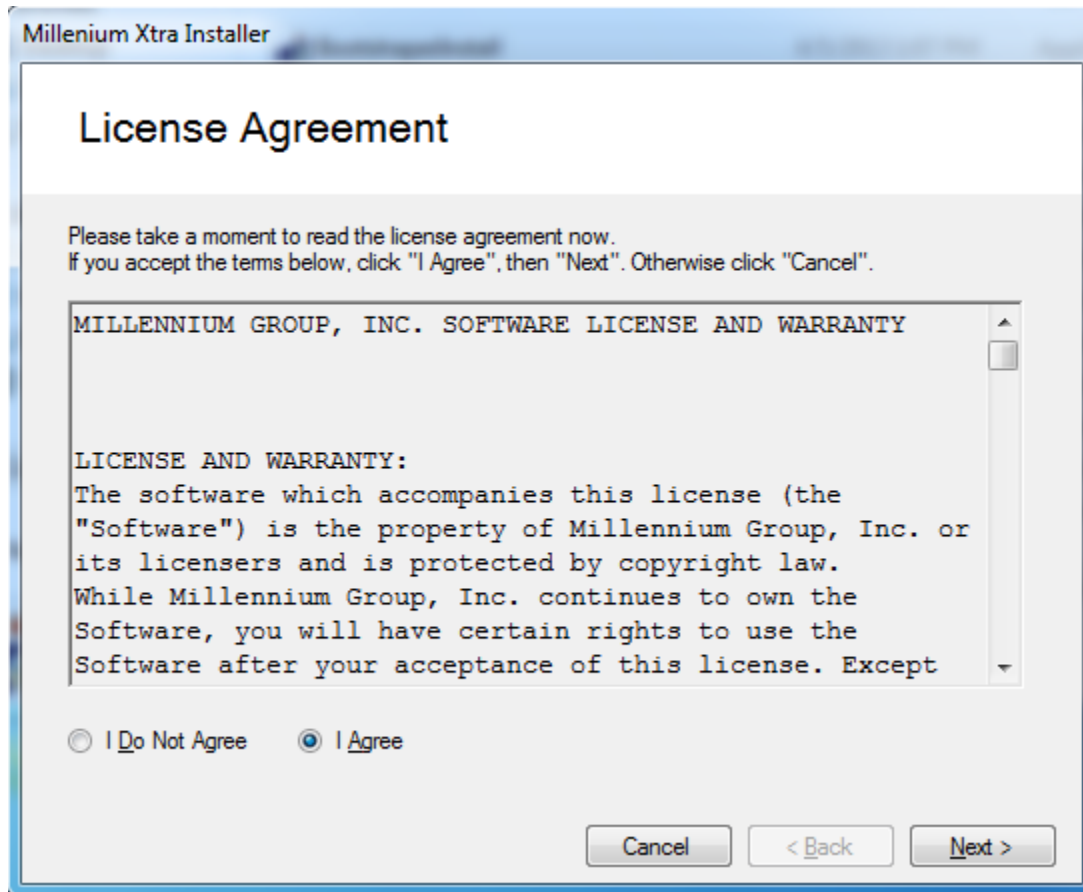

4. Select components to install as shown below and click **Next**

5. Enter SQL server connection string in field **Sql Server**. Select authentication type. Enter User Name and Password if you choose SQL Server Authentication. Click **Next**.

6. Enter path to installation folder. Click **Next**.
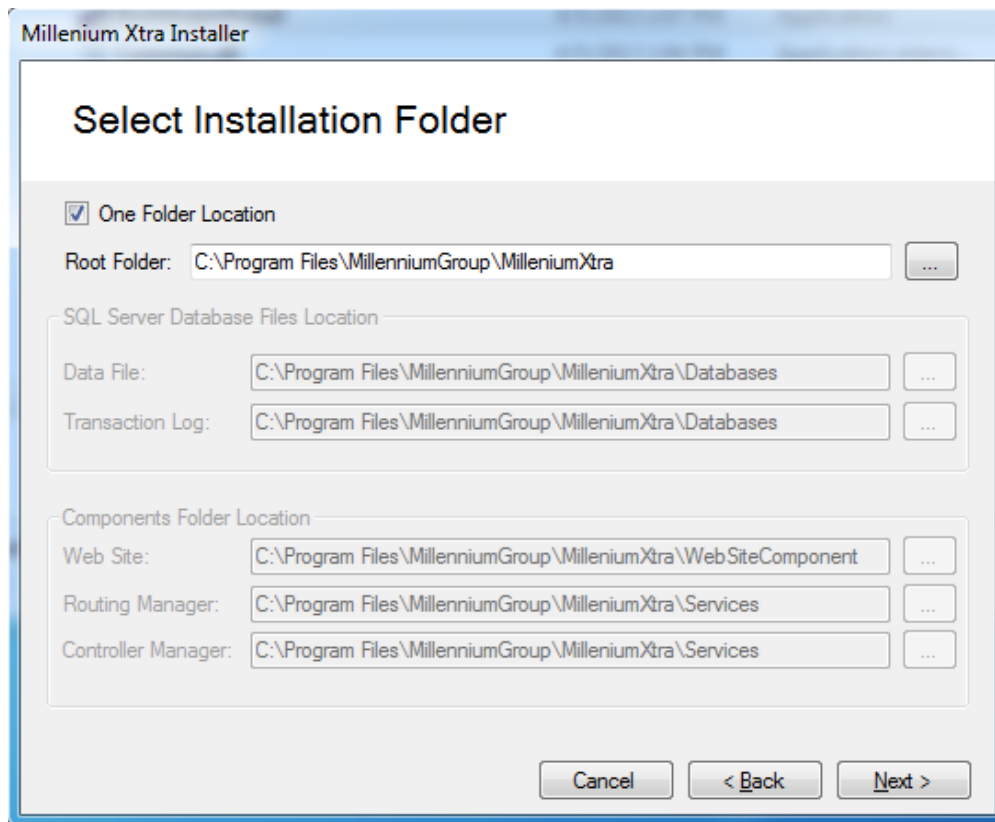

7. Select type of Web Site installation. Click **Next**.

8. Enter Port Configuration as shown below. Click **Next**. Installation will start immediately.
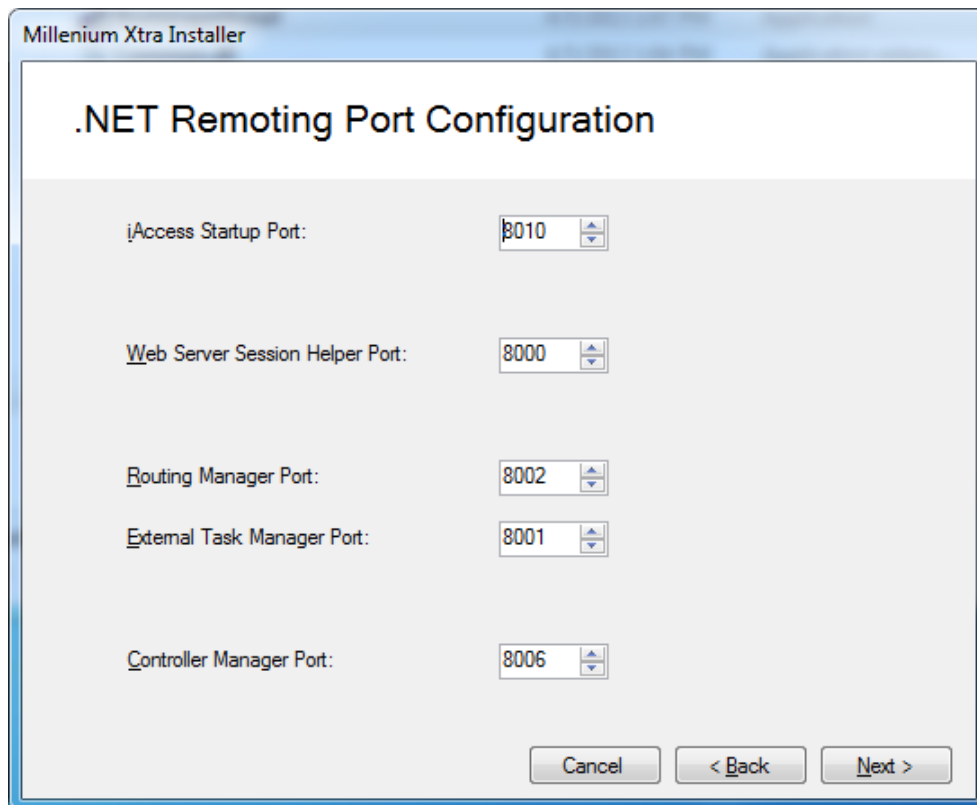

9. Installation complete. Click **Close**.

10. Now you need to put converted database to the right place. Open folder where Xtra system was installed. By default it is:

On x86 Windows:  **C:\Program Files\MillenniumGroup\MilleniumXtra**

On x64 Windows:  **C:\Program Files (x86)\MillenniumGroup\MilleniumXtra**

11. Go to folder **WebSiteComponent\Backup**. Copy converted database from Technical Support here.
12. Run internet browser. If you select "Default Web Site" on step 7 then enter **http://localhost/** in address bar.
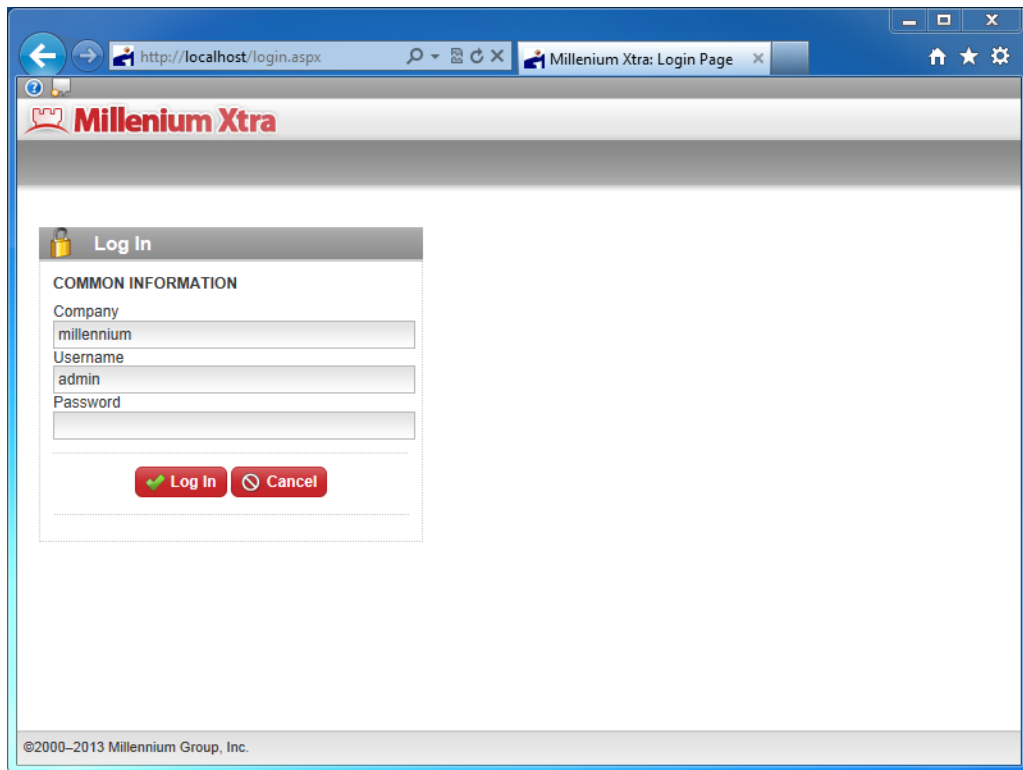

13. Login to the system using next credentials: Company – millennium, Username – admin. Leave password blank.
14. Go to **System Administration > Database Functions > Restore Database**.
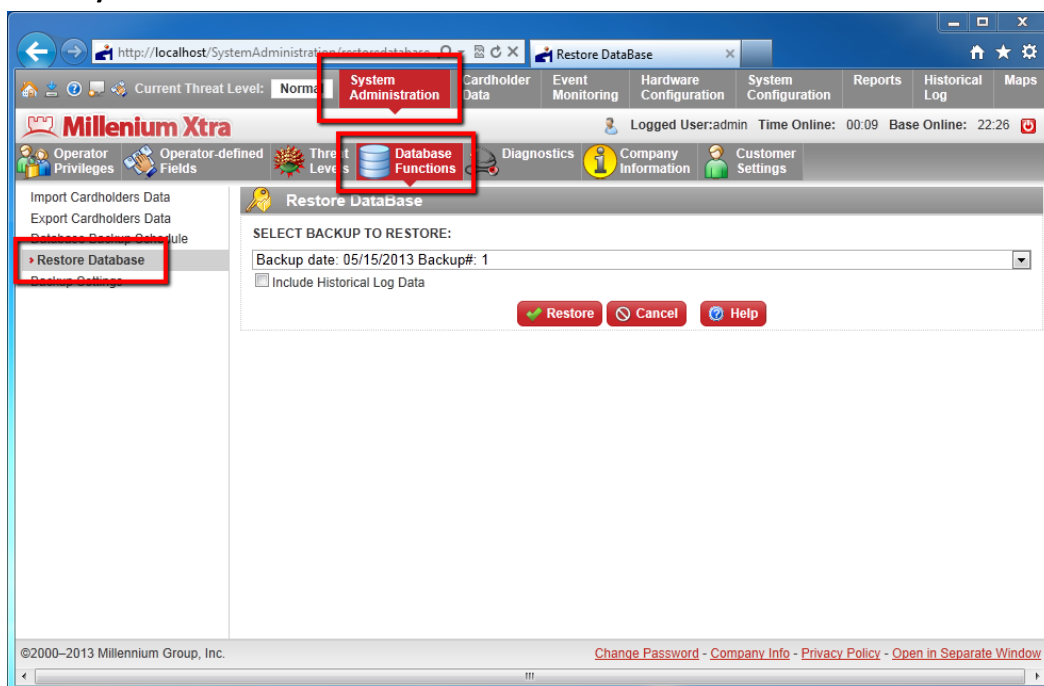

15. In dropdown list, select the backup from the converted database. Click **Restore**.
16. After database has been restored you can log in using logins from your previous system. Password for every user will be 'Pa$$word'.
