Technical Bulletin 035

01-21-2016

Title: Millennium Xtra and Silverlight Support

Contents: Millennium Xtra version 3.0.x uses Microsoft Silverlight in several areas of the product. In particular, the Xtra Event Monitor screen requires Microsoft Silverlight be installed and enabled in order to display scrolling activity on the screen. However, Microsoft Silverlight is being phased out and some browsers, including Google Chrome, now disable Silverlight by default. In the near future, it is likely that most web browsers will discontinue support for Silverlight entirely.

In Xtra version 4.0.x, Millennium has replaced Microsoft Silverlight components with HTML 5. This ensures continued compatibility with all major web browsers. Any Xtra customer who has a current Software Maintenance Agreement (SMA) is entitled to receive Xtra version 4.0 at no charge. To obtain Xtra version 4.0.x or to receive a quote to renew the SMA, please contact Millennium Group's Customer Service department by calling 1-866-455-5222.
